

# **COMMITMENT**

# WE ARE COMMITED TO OUR CORE VALUES AND CORPORATE MISSION:

- ✓ MAXIMIZE CLIENT VALUE BY
  ADOPTING THE LATEST
  TECHNOLOGIES AND INNOVATIONS.
- ✓ IMPROVE PROJECT EFFCIENCY BY STREAMLINING WORKFLOW AND PROVIDE HIGH QUALITY SERVICES.
- SAVE TIME BY USING A LARGE GLOBAL TEAM TO LEVERAGE TIME ZONE ADVANTAGE.
- ✓ REDUCE CLIENT COST BY HARNESSING A HIGHLY EXPERIENCED GLOBAL WORK FORCE.

•	CONTACT US	25

PASMEC is an emerging BIM consultant company dedicated and sincere providing higher quality services to each of its clients with advance, innovative and customized solutions in the project. Our main focus is to assist our valuable clients right from pre-concept until the handover of the facility.

Our BIM Engineers are highly qualified with extensive experience in the construction industry. Each member of our team has his proven track record successful completion of various building projects(High Rise buildings, ResidentialTown, Educational institutions, Commercial buildings, Offices, Hospitals, and Healthcare, Sports Area, etc) of international repute in association with international consultant and contractors.

#### "SATISFIED CLIENT IS OUR ULTIMATE GOAL"

LILIBRADALA

# **BIM & DESIGN SERVICES:**

# **\*** ARCHITECTURE:-

Our BIM Services & 3D BIM Model allow Architectural, Structure, and Interior decoration to review design elements concerning the building systems and other services in the project.

Our BIM Services & 3D BIM Model make better design decision earlier in the process with insight into what your design represent through visualization, coordination, collaboration, and analysis tools.

By using our BIM Services & 3D BIM Model, you can plan and visualization the entire project during pre-construction, before the shovel hits the ground. Space use simulations and 3D BIM Model allow clients to experience what space will look like offering the ability to make a change before the construction start. Having a great overview from the beginning minimizes project costs and time-consuming.

# **STRUCTURE:-**

Our BIM Services & 3D BIM Model allow Structural designer to review design elements concerning to the building systems and other services in the project.

Our BIM Services & 3D BIM Model make better design decision earlier in the process with insight into what your design represent through visualization, coordination, collaboration, and analysis tools.

By using our BIM Services & 3D BIM Model, you can plan and visualization the entire project during pre-construction, before the shovel hits the ground. Space use simulations and 3D BIM Model allow clients to experience what space will look like offering the ability to make a change before the construction start. Having a great overview from the beginning minimizes project costs and time-consuming.

# INTERIOR DECORATION & 3D BIM MODELING:-

Our Interior design & 3D BIM Model allow contractors to review design elements concerning the building systems and other services in the project.

Our Interior design & 3D BIM Model make better design decision earlier in the process with insight into what your design represent through visualization, coordination, collaboration, and analysis tools.

By using Our Interior design & 3D BIM Model, you can plan and visualization the entire project during pre-construction, before the shovel hits the ground. Space use simulations and 3D BIM Model allow clients to experience what space will look like offering the ability to make a change

before the construction start. Having a great overview from the beginning minimizes project costs and time-consuming.

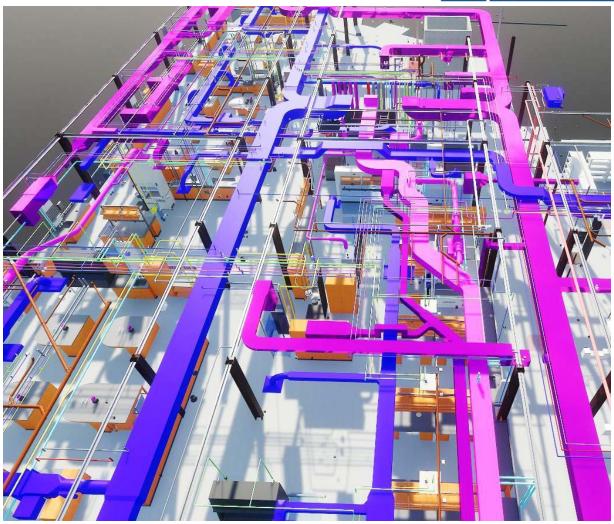

# • MECHANICAL, ELECTRICAL & PLUMBING:-

MEP means Mechanical, Electrical & Plumbing. While BIM which means building information modeling. MEP is one kind of part where the whole thing to be coordinated with each discipline and also coordinate architecture and structure too into the design. While BIM is representing a physical characteristic of a facility to give the design firm and construction industry.

Proper planning and coordination are the keys to the successful execution of the project in the construction industry. Building information modeling (BIM) allows us to create and examine the virtual representation of the Mechanical, Electrical, and Plumbing systems and other utilities. The simulated 3D construction can be used to show design intent to clients with greater visualization, make coordinated drawings for eliminating rework & save time, and also reduce the project cost.

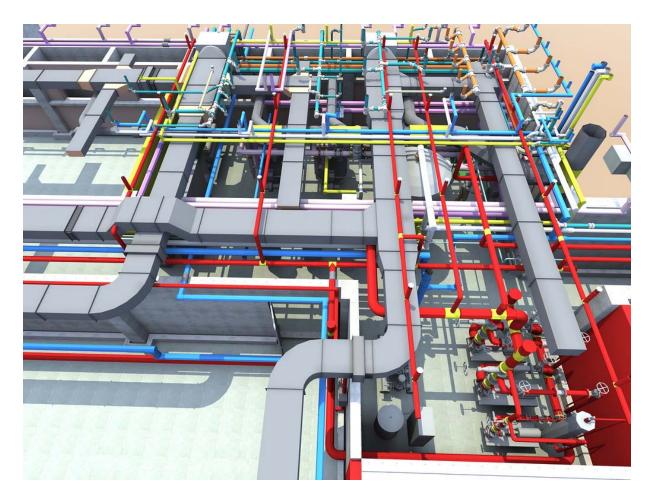

# • BIM COORDINATION& CLASH DETECTION:-

We are specialized in performing detection among various trade and services, coordination with other trade using input like project drawing layout, specification sheet.

This virtual coordination before initiation of installation at the site helps the client to rectify the errors & difficulties, help resource-saving and time, and proper mobilizing of the people working at the site.

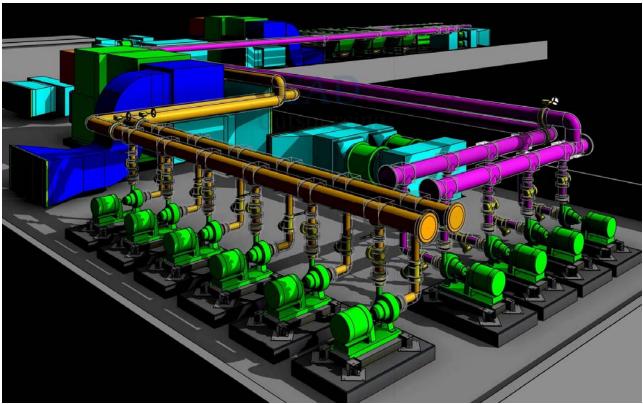

# • MECHANICAL & ELECTRICAL ROOM COORDINATED MODEL:-

We are specialized in performing detection among various trade and services, coordination with other trade using input like project drawing layout, specification sheet.

This virtual coordination before initiation of installation at the site helps the client to rectify the errors & difficulties, help resource-saving and time, and proper mobilizing of the people working at the site.

# • POINT CLOUD:-

Our point cloud to BIM services creates accurate for as-built purposes as well as for refurbishment and renovation projects. Point cloud modeling is widely recognized to be more precise than the traditional survey that uses measuring tools.

The 3D laser scanning technology first captures the as-built environment, then we import the survey data and process it by using software Autodesk Revit.

Our BIM expert can accurately transform point cloud data into a virtual model which is helpful to 3D laser scanning companies a design-build contractor involved in the renovation of building structure with other MEP services.

8 Page

Our services are cost-effective to give better build cost estimates to reduce errors.

#### • 3D BIM RENDERING:-

PASMEC provides 3D BIM Rendering services to Architecture firms, Interior designers, Builders, and Real estate. We specialized create highly detailed, realistic 3D architecture rendering on projects around the world ranging from various industries by collaborating with architects, designers, developers, and builders.

We provide 3D rendering with the exact design, material, and lighting specification of your scheme, including people, vegetation, fixtures, fitting, furniture, etc. We have expertise in 3D MAX, VRay, Revit, and other rendering software.

- 1. 3D Exterior rendering & Interior rendering.
- 2. Photorealistic 3D Architectural rendering.
- 3.3D Architectural animation.
- 4. Architectural flyby and walkthrough.
- 5.Landscape designing.

# • DESIGN VALIDATION & VALUE ENGINEERING:-

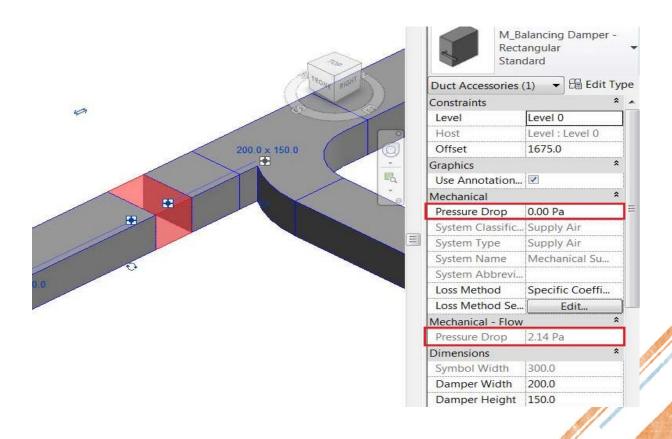

#### • VALUE ENGINEERING:

Value engineering can be defined as an organized effort directed an analyzing designed building features, system, equipment, and material selection to achieve essential at the life cycle cost consistent with required performance, quality, reliability, and safety.

Our creative in-house brainstorming helps to re-design MEP layout and save time for contractor or design consultant. We make proper spacing and posting of hanger for maximum load-bearing and coast optimization.

#### • BENEFITS OF VALUE ENGINEERING:

- Improves system effective & constructability.
- Reduce the material &labour coast.
- Lower installation time.
- Solve constructability issues.

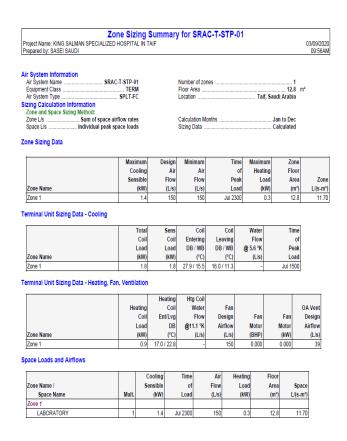

#### • DESIGN VALIDATION:-

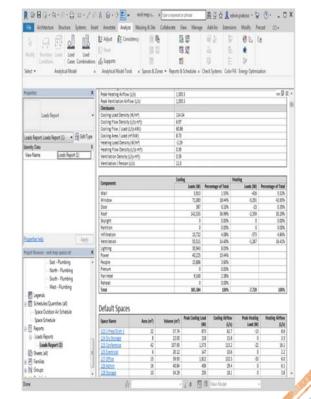

We help clients from the design concept stage itself by providing various design calculations namely heat-load calculation, pressure drop calculation, pump head calculation, electrical lighting & power load calculation, etc. And parallel creating a virtual design 3D Model for consultant & designer review by maintaining all international & local standards.

#### • LOAD CALCULATION:-

Accurate load calculation has a direct impact on energy efficiency, Occupantcomfort, Indoor air quality, and building durability. The load calculation is the first step of the iterative HVAC design procedure as a full HVAC design involves much more than just the load calculation. The load modeled by the heating and cooling load calculation process will dictate the equipment selection and duct design to deliver conditioned air to the rooms of the house.

Our engineer using HAP & REVIT Software for calculation heating and cooling load.

LOAD CALCULATION USING REVIT

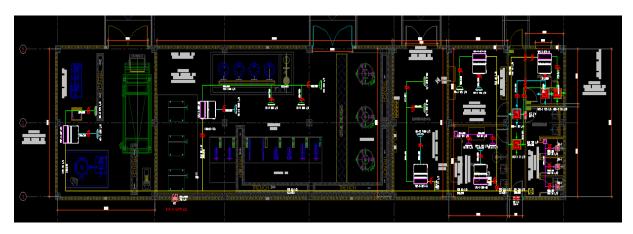

LOAD CALCULATION USING HAP

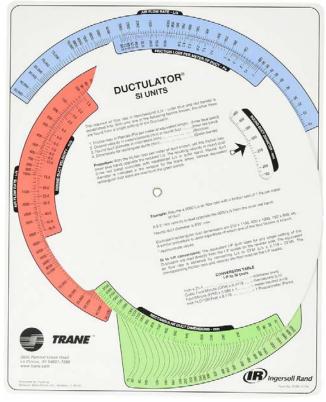

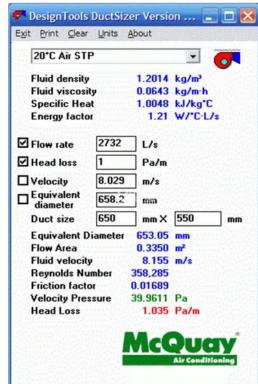

#### • MECHANICAL DUCTING:-

# DUCT SIZING, DOUCT ROUTING, AND LAYOUT GENERATE:

Duct sizing will be done concerning the volumetric flow. We provide the duct size based on air follow with the help of McQuay duct sizer, routing& layout creation. Will be done placing air terminal and sizing duct.

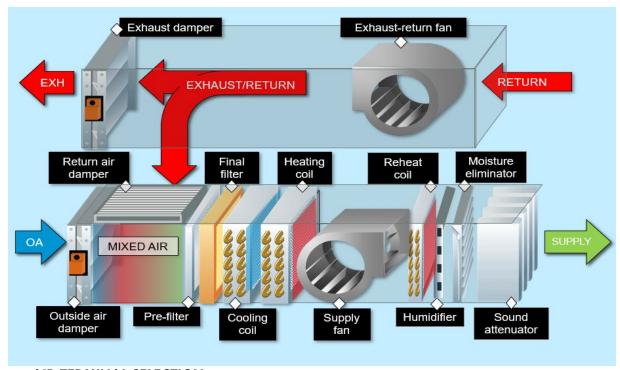

# EQUIPMENT SELECTION:-

Equipment selection based on load calculation & statics pressure loss.

# AIR TERMINAL SELECTION:

Afterload calculation, we can select each space air terminal with the help of standard manuals like air master, etc.

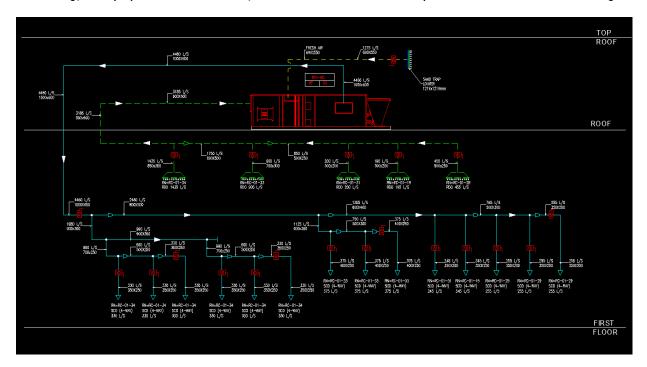

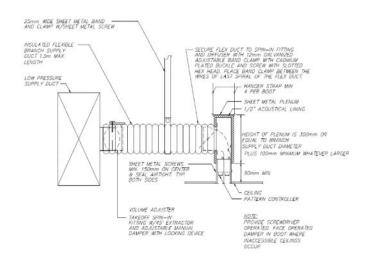

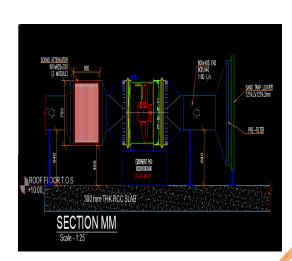

# ■ RISER & SCHEMATIC DRAWING:

After duct sizing and duct layout creation. We can make riser or schematic drawing for flow balancing, every space maintain flow, etc. We can decide the help of riser or schematic drawing.

#### DETAIL, SECTION &ISOMETRIC DRAWINGS:

**DETAIL** SECTION

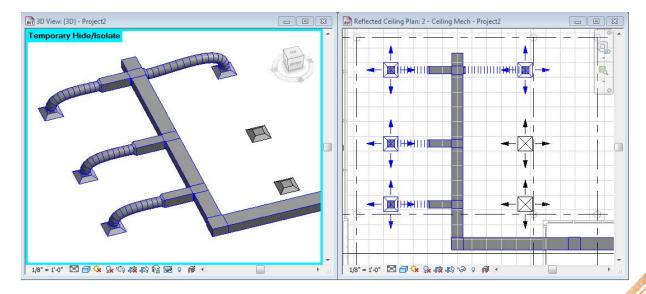

# ■ EXTERNAL STATIC PRESSURE CALCULATION (ESP):

External Static Pressure is the measurement of all the Resistance in the Duct system that the fan has to work against. Examples are Filters, Grils, A/C Coils, and the ductwork. It is the sum of the Suction Pressure (Negative) and Discharge Pressure (Positive) created by the equipment blower.

Our Engineer Calculate External Static Pressure by using Revit & Elite Software.

# • BAR BENDING SCHEDULE (BBS):-

Bar Bending Schedule or Schedule of Bars (BBS) is a list of Reinforcement Bars for a given Reinforced Concrete work item and is presented in a Tabular Form for easy Visual Reference.

Table of Bar Bending Schedule Summarizes all the needed particulars of bars Diameter, Shape of Bending, Length of each bent and straight Portions, Angles of Bending, Total Length of each Bar, and Number of each type of Bar. This Information is a great help in preparing an estimate of quantities.

Bar Bending Schedule is when used along with Reinforcement detailed drawing improves the quality of construction, cost, and time-saving for concrete construction works.

Our Bar Bending Schedule (BBS) help all project stakeholders to enhance productivity and carry out constructability analysis.

# • QUANTITY TAKE-OFF (QTO):-

Quantity take-off (QTO) is a detailed measurement of materials and labor needed to complete Construction Projects. This process includes breaking the project down into smaller and more manageable units that are easier to measure or Estimate. The level of detail required for measurement may vary. These measurements are used to format a BID on the scope of construction. PASMEC review Drawings, specifications, and models are to find these quantities. With BIM quantity take-off can be conducted almost automatically given that the type of material, their quantity and price is included in the model. It is known that construction projects often run over time and budget and one of the reasons is lack of accuracy is quantity takeoff and estimates.

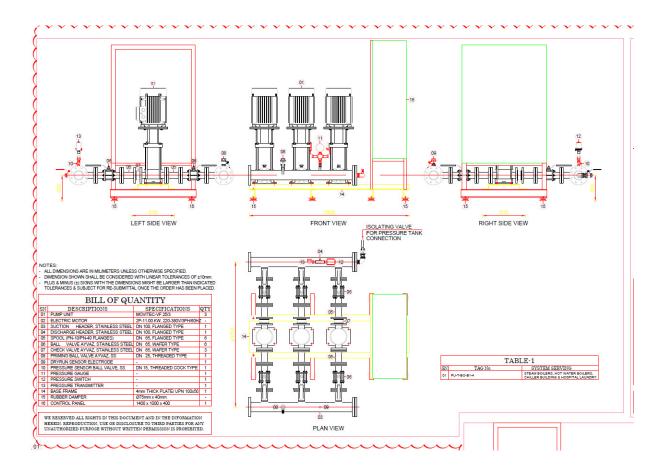

Quantities can be generated for a specific period or project area (4D/5D) to help manage material procurement and save inventory costs. Quantity take-off covers all DUCT, DUCT-FITTING, EQUIPMENT, HANGER, etc.

SI.No.	Damper Type	Size (in mm)	Quantity

# • 2D INSTALLATION DRAWING:-

PASMEC specialized in preparing actual 2d installation drawings after coordinating with other trades. Showing elevation of the systems, tagging of systems & elements size & type, dimension and annotating, section and call out is shown on the drawings for congested area/part. Isometric and Riser drawings whole systems and buildings are prepared separately for engineer's reviews at the site for overall understanding of the project design systems.

# • AS-BUILT DRAWING:-

An As-built drawing is a revised drawing created and submitted by a contractor after a construction project finished. They Contain any changes made from the initial drawing during the construction process and provide an exact rendering of the building and property as it appears upon completion.

PASMEC specialized in preparing actual As-built 3D model and As-built drawing from scanned paper drawings, survey data, or laser scan data.

# • CAD SERVICES:-

2D drawing essential for communicating ideas in industry and engineering. To make the drawing easier to understand, people use familiar symbols, perspectives, units of measurement, notation systems, visual styles, and page layout.

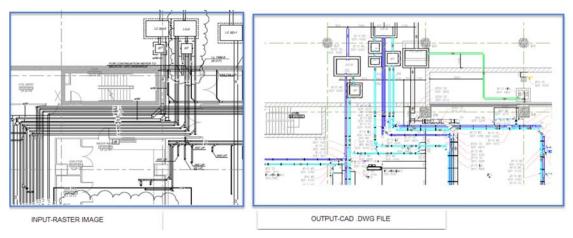

In cad services, we offer the below-mentioned services.

#### **1.RASTER IMAGE TO CAD CONVERSION:**

We specialized in the conversion of legacy paper drawings into accurate CAD drawings as per client CAD standards or as per the prevalent International Standards.

Input Format: TIF, PDF, CAL, JPEG

**OUTPUT FORMAT: AUTOCAD** 

#### **2.FILE FORMAT CONVERSION:**

- A. We convert DWG files DGN files and Vice Versa.
- B. We convert DWG & DGN files to plot & PDF files.
- 3. Standardization of Drawing.
- 4. Redline mark UPS update.
- 5. Design Hand Sketch to CAD conversion.

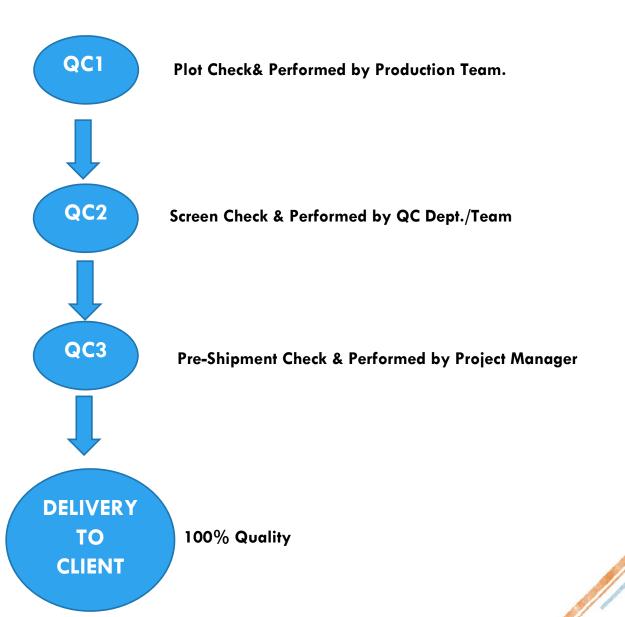

# • QUALITY CONTROL PROCESS:-

Our QC process is managed by an independent QC team. We have implemented the Environment Management System.

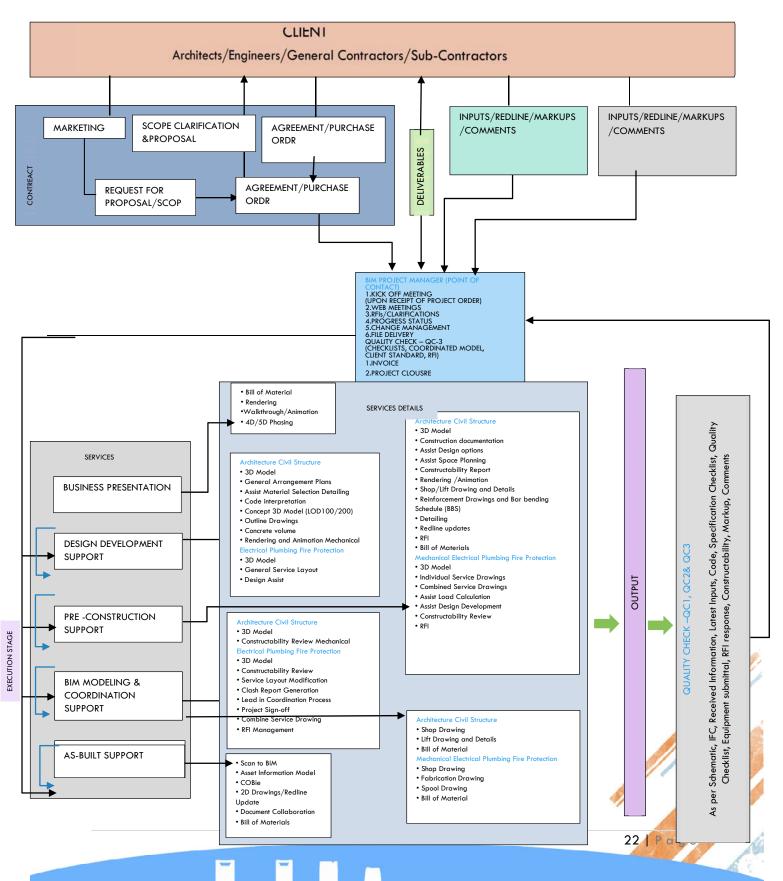

The main objective of the quality control (QC) process is to detect errors and rectify them. Ensuring quality is a group effort and our dedicated QC team is led by a highly qualified and experienced Manager in M&E Coordination and Quality Control.

# The entire QC process is handled in three phases:

# • Work Process Flow Chart:-

# • Why PASMEC?

PASMEC is providing innovative BIM services. Our in-house team of more than 50+ experienced Architects, Engineers, and BIM professionals help us provide end-to-end solutions to discerning clients around the world.

# **Quality Output**

Our Quality Control Team is led by employees who have more than 10 years of experience. Our process orientation & quality control is as per International standards. Our Pre-construction & Prefabrication reviews with RFI generation help clients make better use of manpower and improve the quality of construction, reducing rework and wastage. Detailed Material BOQ & Shop Drawings with 3D visualization enable a better look at "The Big Picture" and aid in the review, scheduling, and monitoring of each project.

# **Fast Turnaround**

Our skilled team of professionals can provide quick turnarounds on complex projects. PASMEC has completed several large-scale projects across the world.

# **Less Expensive**

Clients rely on us for our top-of-the-line services at reasonable rates. We help clients assemble projects in a virtual environment for identifying and correcting potential problems before construction. We offer a cutting-edge advantage in terms of Building Information Modeling services, facilitating project coordination, collaboration, asset management, risk mitigation, logistic planning, and cost optimization.

# **Technical Strengths**

Our professionals use the latest BIM software: Autodesk Revit, AutoCAD Architecture, Navisworks, Inventor, AutoCAD Civil 3D, 3DS Max, Sketchup, SolidWorks, Autodesk Fabrication,V-Ray etc.... As we have a deep understanding of global and regional codes and standards.

# **Global Presence**

PASMEC has offices in INDIA (Kolkata).

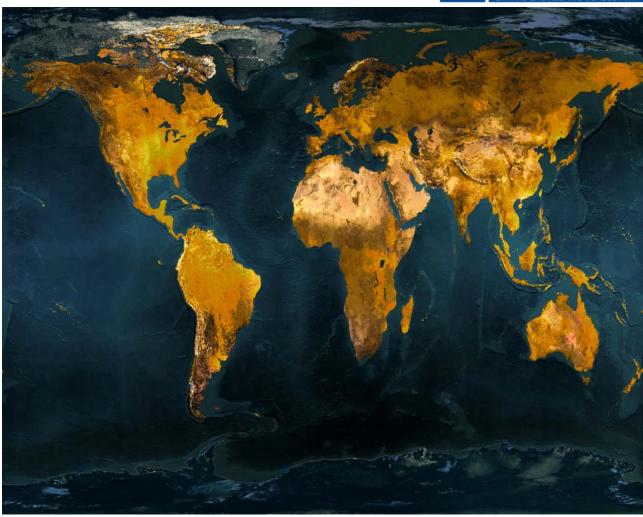

# **Communication**

PASMECProject Management team is available to clients through several communication channels including:

- 1. Global telephone networks for instant communication.
- 2.Email (on Google server) for reports and interactions.
